

Lower cost and faster turn-around times than wood signs.

**NO MORE SEASONAL PROTECTION!
NO MORE REPAINTING!
NO MORE REPLACEMENT!**

PolyCarve™

Ultra Durable Thermoplastic Signage

Resists Weather...

Finished Polycarve signs can take any punishment the weather or climate can dish out. UV-stabilized PolyCarve resists fading and will not delaminate. Not only do PolyCarve signs take the sub-zero cold...they also take the heat, rain and wind. Users can expect years of trouble-free service in any climate.

Resists Graffiti...

PolyCarve is a unique non-stick, non-absorbent material that helps protect against damage from markers or spray paint. Graffiti wipes off in seconds using the appropriate cleaning solution!

Resists Vandalism...

Outdoor signs are specially vulnerable to knocks and bruises from people as well as from nature. Impact-Resistant PolyCarve won't crack or chip...so it's perfect for thwarting the sticks and stones of mischievous vandals.

PolyCarve is also Environment-Friendly.

Certain colors allow us to use the most advanced technology to manufacture high-quality core layers using recycled thermoplastic. Recycling helps reduce the need for virgin raw material, conserves our national resources, reduces disposal and landfill costs...and permits us to pass the savings on to our customers.
